Abstract of JP 1307944 (A)

PURPOSE: To simplify a picture recording reservation by storing in advance information containing the contents of a telecast and a corresponding time period, and to display by a table format on a television receiver and setting the picture recording reservation from this display information. **CONSTITUTION:** Information containing the contents of a telecast and a corresponding time which is stored in advance in a storage means RS is outputted to a television receiver TV by a display control means DC, and displayed by a table format on the television receiver. Accordingly, the contents of the telecast and the time period are visible by the same format as a program table of the telecast inserted in a newspaper and a specialty magazine. In such a state, information is selected from the table by a cursor and the selected telecast contents is set to a picture recording reservation means TM of a video picture recording device by a picture recording setting means RS. In this way, the picture recording reservation of a program can be simplified.
